Serenity

Serenity GI Lab

Paperless, Hosted, Management Solution for the Validation, Leak Testing & Reprocessing Endoscopes

Simple, Easy to Use and Implement

No software installation or contract required • Quick and simple • Ready for you to start reducing your costs and managing your workflow processes

A paperless solution to manage flexible endoscope reprocessing, workflow, maintenance, documentation and reporting.

<i>Immediately increases "Patient Safety" by accurately managing the reprocessing workflow.</i>	<i>Saves valuable staff time in eliminating paper records and accessing documentation to process endoscopes.</i>
<i>Patient Traceability made possible through electronic tracking of goods to patients historically.</i>	<i>Centralised database for endoscope inventory and records.</i>
<i>Leak Test Pass/Fail with "Auto Leap" to maintenance - recorded against the item upon failed leak test. Helps reduce damage to scopes and costs.</i>	<i>Maintenance by date or by usage or requiring repair - includes user warning flags when maintenance approaches threshold.</i>
<i>AER Cycle Pass/Fail, validation and till roll printout, electronic storage.</i>	<i>Reporting - recall, usage, maintenance & costs by date range, manufacturer, supplier and more.....</i>
<i>Store and retrieval of OEM documents and other user interactive media.</i>	<i>Store and access SOPs and instructions at the scope item level.</i>
<i>ISO and ASNZ guideline compliance and more ...</i>	<i>Manage loaner requests / returns.</i>
<i>Endoscope & staff productivity manage your costs and resources</i>	<i>Increase endoscope utilisation by decreasing downtime due to fluid invasions and turnaround time.</i>

About us: Medical Systems Design Pty Ltd

SurgiDat has been in the Health IT industry in Australia for the past 10 years and now as a Brisbane based company for the past 4 years, specializing in Patient Centric Inventory Automation, with many happy clients using our services in AU, NZ & USA.

This latest offering is provided as a hosted service to the area of GI. Serenity is already installed for you to use, no server requirements or maintenance, no contracts and is currently being utilised in more than 20 hospitals in AU and the USA.

Serenity GI Lab is a simple to use, but a sophisticated tool, to help staff members with documentation, process control and reporting of the GI process, including maintenance and recall of items to patients, information, document storage and manufacturer information views. Serenity shows "Storage Times" for scopes about to expire.

Keeping it "simple and easy to use" while delivering the level of sophistication expected from an electronic system, Serenity GI Lab ticks all the boxes.

Please feel free to call us to discuss your requirements and/or to arrange a remote web based demonstration at your leisure.
